Onsite Associates Program Manufacturer Information Detroit Axle offers an extensive coverage of bearings for a large range of automotive and heavyduty wheel end applications. Detroit Axle products delivers the look, feel, fit and performance of OE. Manufactured with Internal bearing seals that are specifically designed to combat all types of road conditions to keep debris out and keep the bearing turning. With am OE design, simple installation and and long life as a guarantee.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Danny Gonzales 1.0 out of 5 stars I dont want to return the whole unit because it took hours to install it.They want me to pay to ship the core and the defective rack back to them and then pay again to ship a replacement, you are better off paying a little more and getting a rack from the local store incase of issues These racks are garbage it is no wonder the auto industry

is leaving Detroit. Stay away! This keeps the rack properly lubricated and vented.<http://mcaschool.com/files/fckeditor/canon-b840-manual.xml>

It comes with everything you need; steering rack adapters, 2 6AN hoses, Power Steering Reservoir, and reservoir bracket. Our A.N. Fittings are the highest quality fittings in our industry and our Power Steering Reservoir has years of development on the craziest builds in the world. From Formula Drift to Unlimited Time Attack. Manual racks are 4 turns lock to lock, Power racks are 3 turns lock to lock. Aftermarket rack and pinions to decrease the steering ratio on manual racks are expensive and time consuming to install. There are Power Steering Delete kits that loop the racks but this is quite bad for your steering rack and can blow out the seals. We know from experience on a Time Attack Civic, two racks down the drain! Fluid shoots out at high speeds. That's pressure that needs to come and go as it needs. Our vented and baffled reservoir handles this with ease. We make a Honda specific Power Steering Kit that retains power steering. It is available here You may get some small residual spillover through the cap when you first use the kit but its just settling in and getting air bubbles out. This keeps the rack properly lubricated and vented. It comes with everything you need; steering rack adapters, 2 6AN hoses, Power Steering Reservoir, and reservoir bracket. Our A.N. Sent back the incorrect parts, and received the correct replacement parts quickly. Installed it, and everything worked out. Even with the tough times, they are making sure they took care of me. Review by Rommel A. on 10 May 2020 review stating Perfect fit, great build quality. Perfect fit, great build quality. Review by Frank A. on 13 Mar 2020 review stating Amazing. Got my order and man, I was happy how well the craftsmanship is. Review by Chris S. on 23 Jan 2020 review stating Quality Product. Couldn't be happier. High quality, US made,. Gives you more space to work on your engine. If its coming from the stock fittings on the fluid inlet and outlet then this will likely fix it. If its coming from somewhere else then this wont fix other leaks. My rack has 3 outlet and picture shows 2. How is this address for install. It is not a part of the fluid system so it will not leak. With a power rack it is less turns lock to lock so you get better steering feel. However, using our Power Steering Delete kit will still leave you with a smooth steering feel. Id like to make sure that both of the loop lines will fit and that the third port can be properly plugged.

We'll still revisit the DA Integra eventually but we have to find a good mock up chassis first. If you would like us to make something for your application you can send us the line measurements and fittings needed and we can make a custom kit for you. If you send us the measurements for the lines, the type of bracket, and the fittings needed for your steering rack we can make a Custom Power

Steering Delete for you. Manual steering is a pretty common swap on modified Hondas because many think it has a better weight and feel to it. If you're planning an engine swap, a manual steering conversion makes even more sense, since you don't have to attach a power steering pump, run a belt to it, and run hydraulic power steering lines to the rack and pinion. The minimal amount of weight reduction is a bonus as well. This is the worst of both worlds; you still have the weight and parasitic power loss of a power steering system, without any of the benefits thereof. The power steering rack is also geared differently than the manual rack, so steering weight will be even heavier than a regular manual steering rack and there's no guarantee the steering feel or response would actually improve; there's really no benefit to taking the easy way out like that. Doing it the correct way with a manual steering rack available here is a little more involved. Because there's no fluid running through it, the body of the manual steering rack is narrower than the power rack, so the mounting points opposite from the pinion tower are a little different. There are three ways to overcome this. This is illadvised because the two bushings stacked on top of each other will, at minimum, make a lot of noise. The more likely problem is that they will flex too much, which can lead to the steering binding up.

<http://anthonycohen.com/images/briggs-and-stratton-3.5-hp-engine-manual.pdf>

This works, but you still have to order a manual steering rack mount bushing, so if you're going to do that, you might as well. It just so happens to fit perfectly over the steering rack, and the bolt holes are elongated to allow for the sway bar to flex, so if you use washers this will allow you to use the bolt holes on the power steering subframe. The stock steering shaft will connect to the input shaft of the manual steering rack, and the input shaft ends at the right place as well. However, because the hydraulic component is missing, the pinion tower itself is shorter, leaving more of the input shaft exposed. This is an OEM Honda part that you might be able to find at a junkyard but might also have to order from a Honda dealership. Without the spacer, the floor panel that the steering shaft goes through will not remain in place, which means water or road debris would get into your footwell. You should still replace the outer tie rod ends any time you replace the steering rack anyway; it's the same amount of labor, and the tie rod ends are a wear item that need to be replaced as part of general maintenance this goes for any car where the steering rack is being replaced, not just conversions like this. If you're more of a visual learner, there's also a very helpful video tutorial available here. We carry both brand new and fully remanufactured items from quality name brands like Borgeson, Unisteer, ZF, Duralo and more, all backed by a minimum oneyear warranty sometimes longer! and USbased customer service. The use of fluids not specifically designed for Honda vehicles will void the manufacturers warranty on this part. That was faster then ordering from the dealer. I was happy with the speed and the price was better than I ever thought. We saved money and the owner was in shock, he thought we put in used parts. I am very pleased and would tell any shop owner save your money and feel great that your customer saved money and will have repeat business.in the long run grat service bring them back.Patty CARS of cambridge, wi. Satisfied with parts 100%. You must have JavaScript enabled in your browser to utilize the functionality of this website. Select a vehicle to view fitment notes. All of our cars need this adjustment because it almost certainly hasnt been done since the warranty expired. Performing this adjustment takes the slop out of our steering racks.The only way to get to it is with a special locknut wrench made by Honda. Its a special order.Neither the locknut or the 14mm bolt are particularly tight. No torque wrench is needed since you cant get one in there anyway.Loosen the locknut and hold it while you break loose the 14mm. Then tighten the 14mm until you feel it seat inside the rack get tight.The spec is 3 ft.lbs 20 degrees which is like nothing. Then tighten the locknut. Test the steering by rolling the wheel all the way in each direction, give it a test drive, and thats it. Part number QSF10U001. Sign up for newsletter today. PayPal Credit is a trading name of PayPal Europe S.a.r.l. et Cie, S.C.A., 2224 Boulevard Royal L2449, Luxembourg. This article specifies the '92'95 Civic platform. This is the only platform that the '94'01 Integra steering rack will fit. There is no steering rack compatible with the '96'00 Civics. Also, the 1st gen Integra rack will fit in the 3rd gen civic. The platform that benefits the most, is the hatchback. The shorter wheel base of the 5th gen hatch allows for quicker turnin. This sounds like a big project, but it really isn't. This is the ONLY way you can swap the rack if you have a civic equipped with ABS. You will need to remove the black cover around the column.

Once you remove the column, you will need to remove the two small bolts that clamp down the universal joint. Slide the universal out and move on to raising and securing the vehicle. You will need the clearance to remove the sub frame. There are 6 huge bolts per side that need to be removed. If you already have power steering, you will need to remove the lines. You may want to consider another pair of hands to help guide the subframe down and then back up. If you are swapping to

power steering from a nonpower steering rack, you will notice that the sub frame doesn't have the correct holes for the new bracket on the passenger side. If you enlarge or notch the holes on your original bracket, you can get it to work without any trouble. The other side is a bolt on affair. If you are going from a power steering rack to power steering, it is far more straight forward. The stock Civic rack is on top and the Integra rack, with new bushings, on bottom. If you look carefully, you can see how much larger the shaft is on the Integra rack. The Civic's lines are different than the Integra's lines. You can use the Integra lines on a civic PS pump if you have not swapped the engine. Use the jack to raise the sub frame back into place. Reattach the ball joints and tie rod ends. Finally attach the coupler to the steering rack and steering column. You will probably need to center the steering wheel by trial and error. Understand that the universal joint can slide up the steering column shaft far enough to allow it to come off of the rack itself. This makes it easier to make fine adjustments to center the steering wheel. It is much more difficult on standard civics and impossible with ABS equipped civics. You will need to undo all of the lines and bolts from under the car. You will still need to drop the exhaust and shift linkage. Once everything is free, you can try to maneuver the rack out of the car. I've seen it done and it's not pretty.
