The ConnectPort TS implements Digi's patented RealPort COM port redirection software which provides local serial port functionality. The ConnectPort supports both hostinitiated and deviceinitiated RealPort connection modes. SSH, SSL, TCP and UDP connectivity are also supported to each port. Management of the device is possible through Digi Remote Manager, web services, CLI and SNMP connectivity with mass configuration and customization tools available to pre configure devices prior to deployment. The ConnectPort TS also supports USB connectivity for data logging or configuration loading. All rights reserved. It offers easy installation, and network efficiency and control at a low price per port. This means less overhead at the host and less traffic on the Ethernet. These locally administered ports allow full control of serial ports. The EtherLite models feature real serial ports and do not carry the burden of Telnet, Rlogin, Reverse Telnet or other complex networking overhead. This makes the EtherLite simple to install and configure. Simply attach the units to a twistedpair Ethernet segment, set the IP address and load the device driver under UNIX or Windows. The simple instruction guide included with the EtherLite and automated procedures save valuable time. The EtherLite supports port speeds up to 115 Kbps, ideal for handling all of today's serial devices. Hardware and software flow control is provided to manage data flow at even higher baud rates. All this performance for an extremely low price per port. Digi International makes device networking easy by developing products and technologies that are costeffective and easy to use. With over 20 million ports shipped worldwide, Digi has been offering the highest levels of performance, flexibility and quality since 1985. <http://www.universalsoccer.fr/uploadfck/bryant-thermostat-manual-tstatbbprh01-b.xml>

Port buffering allows the Network System Administrator to capture vital information from the serial ports of managed UNIX servers for problem resolution. The PortServer TS Family extends the Network System Administrators ability to monitor and control remote data center facilities from anywhere at anytime.

In addition to data center needs the PortServer TS Family connects terminals to database applications such as travel reservations and information services and is a smart solution for kiosk and small ISP management applications. Digis patented RealPort technology provides local serial port functionality as well as ining and outgoing Rlogin and Tel sessions on each port giving Network System Administrators a higher level of control over those work connected serial devices. The PortServer TS also features Digi Port Authority Remote DPA Remote a management tool for monitoring work and serial activity from a Windows or UNIX based client or server. DPA Remote provides live graphing of serial and Ether activity plus the ability to see signals on all ports for troubleshooting cable or flow control issues.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. RFC 2217 Telnet Com Port Control Protocol is an extension of the Telnet Protocol that provides a method for device servers to accept Telnet sessions and pass the Telnet data received to a com port, and pass data received from the com port to the client. It also allows the device server to send the client any serial line status changes, and allows the client to manage flow control with the device server. It also allows a client to send configuration information to a device server.

IBM i is an RFC 2217 client, and it establishes a Telnet session to an Ethernet device server that is an RFC 2217 server. An IBM i RFC 2217 session provides a virtual com port for an Async or PPP line. IBM i support for Ethernet device servers provides the following capabilities. The TCP Server configuration allows other network devices to initiate a TCP connection to the serial device attached to a serial port of the Digi device server. This is also referred to as Reverse Telnet. Both IOLAN serial ports must be configured for Serial Tunneling; typically one serial port is configured as a Tunnel Server and the other serial port as a Tunnel Client. In the Serial Tunneling configuration select Act as tunnel server. IMPORTANT: Multitech MT9234ZBA external modem default settings include DSR always ON. This causes the vary on of an IBM i switched Async or PPP line to fail. The modem must be configured to have DSR ON only when there is a connection. The procedure is included below. This same procedure should work for other external modems as well. This requires that the IBM i have a WAN card with a serial port to which the Multitech modem can be attached. This procedure can also be performed by attaching the modem to a serial port on a Windows or Linux PC and using a program such as HyperTerminal or PUTTY to send the AT commands to the modem. However, a new Async or PPP line description must be created with the configuration information for an Ethernet device server. The PTFs provide the necessary parameters on the CRTFAXD command to. In case a problem does occur at the client site, like other non-IBM products attached through IBM LAN adapters and standard protocols, IBM will participate with clients and other vendors in problem determination under standard IBM warranty and service agreements. If IBM determines the problem is associated with the IBM adapter or with the IBM protocol implementation, normal problem resolution procedures will follow.

The modem emulation allows existing modembased applications to make connections over IP networks. The incorporated RealPort makes it possible to

establish a connection between the host and networked serial device, allowing software applications to work with networked device servers instead of requiring a host adapter. The device also features SNMP management, SSH for creating secure IP network, port buffering and support for Windows and various flavours of UNIX. 3 If the Software Installation menu does not display automatically when you insert the CD into the PC, start the program in the root folder of the CD. Network Settings Obtain an IP address for the wireless port of the Digi device from your IT administrator. It should either be a reserved IP address supplied by DHCP, or a static IP address. If you will be using a reserved IP address with a Digi ConnectPort TS W device, you may need to perform steps 1 through 10 in the Installing a Digi ConnectPort TS W section before you have all the information you need to provide to the IT administrator. 4 If there is only one MAC address printed on the bottom of the ConnectPort TS W device, it is for the wired port, not the wireless port. If you are installing a Digi ConnectPort TS W device, but there is no DHCP server on the subnet that the PC is connected to, then you will also need to get a temporary static IP address that is on the same subnet as the PC running the installation software. Also refer to the description of the set wlan command in chapter 2 of the Digi Connect Command Reference document. Refer to the Installing a ThirdParty Terminal Emulation Program or Telnet Client section. Type q then press the Enter key to exit it. 4. If an error message is displayed that this is not recognized as an internal or external command, and you are running Windows Vista, Windows Server 2008, or Windows 7, you need to enable the Telnet program it is disabled by default a. Open the Windows Control Panel. b. Go to Programs or Programs and Features. c. Click on Turn Windows features on or off. If you are prompted for an administrator password or confirmation, type the password or provide confirmation. 9 D. In the Windows Features dialog box, select the Telnet Client checkbox. e. Click OK. The installation might take several minutes. 5. If no Telnet client is installed, you will need to install a thirdparty Telnet client.

Installing a ThirdParty Terminal Emulation Program or Telnet Client You only need to install a thirdparty terminal emulation program or Telnet client if the instructions above indicated this was necessary. There are many freeware, shareware, and commercial programs available. For your convenience we have listed links to some of them.
