Spam free Maximum of 1 email per month. But if you're not a car aficionado, you probably haven't. But if you're not a car aficionado, you probably haven't kept up with the latest car trends and features. That can put a real damper on your car buying experience when it's time to replace your current vehicle. But is the newest model of your current vehicle really the best car on the market for you? It's as simple as following our guide. Let's dive into a practical approach to buying a new car. Nowadays, car manufacturers differentiate their catalog by specializing their products for a targeted type of clientele. Knowing what you're looking for. Buying a Jeep would likely be your best bet. You're a family of five and a sedan isn't going to cut it. A larger SUV with plenty of seating and builtin entertainment could be a godsend for those long drives with the whole family. Ask yourself, do you want a manual shift or are you comfortable with an automatic? Some vehicles excel in city driving environments and enduring the stop-and-go traffic of the daily commute. Opting for a four-cylinder engine can save you hundreds on yearly fuel expenses. Think about perks like remote starters, seat warmers, and television displays. You should have an idea of the type of car you want, such as an SUV or Jeep, as well as a list of must-have features like a backup camera and four-wheel drive. That includes car payments and car insurance. Take a moment to calculate 15% of your monthly income to determine the ideal monthly car payment. A great credit score can limit the impact of a car loan's interest, but you may want to compensate and aim for 12% of your monthly income rather than 15%. While buying has been the traditional choice for decades, the popularity of leasing continues to grow and now accounts for 27% of all new vehicle

financing. <http://gapoom.com/upload/fckeditor/cascade-1500-canister-filter-manual.xml>

However, by choosing to purchase a vehicle you also gain equity with every payment and have the freedom to sell the car whenever you'd like. Payments are significantly cheaper, but you must return the car at the end of the lease. It's a good way to drive a car that may be outside of your budget otherwise. At the end of most leases, you'll have the option to buy the car at a slightly reduced price if you choose. Still, leasing is no doubt the most expensive way to own a car — but the cheapest way to drive one. That means you're finally ready to narrow down your options through the help of a comparison website. At this point, your choice of model mostly comes down to stylistic preferences. Look at online reviews for any car model that catches your eye. You'll get a good sense of the vehicle's reliability and performance. Some car manufacturers are notorious for poor quality control, weak warranty coverage, or undertrained technicians. Any of these factors can throw a certain degree of risk into your purchase, though lemon laws in your state may be able to help. With this, alongside a physical evaluation, you should have a good idea if this car is right for you. Otherwise, head back to the car finder tool to discover some alternatives. You just need to put in a bit of effort to find it. Then search our website for more auto and motor coverage. Having a vehicle that is both appealing and reliable is essential. With Having a vehicle that is both appealing and reliable is essential. With all the different automobile options on the market, selecting the best one is no easy

task. Are you looking for a vehicle that is sensible and fuel efficient. Does your new vehicle need more power for offroading When buying a Jeep Wrangler, you can take advantage of several unique and helpful features. While this newer model pays homage to the Wranglers of the past, it is definitely unique.<http://tourpark.com.ua/temp/fckeditor/casas-test-administration-manual.xml>

The main difference between the new Wrangler body style and the old one is the longer and wider body. The four-door model is around 4 inches longer than previous models. These new Wranglers also have a larger wheelbase, which is perfect for traveling over rugged terrain. Accommodating this larger and thicker glass required Jeep engineers to get creative with how they structured this new Wrangler model. The team at Jeep understands their offroad-loving Wrangler audience extremely well. This is why the new Wranglers feature steel bumpers. These winches are a must-have for any offroading enthusiast that wants more versatility. If you are ever stuck, pulling yourself out should be easy with the help of your durable steel bumper and a high-quality winch. If you are looking for a great deal on a new or used Jeep Wrangler, be sure to visit this dealership. With their help, you can get the Wrangler of your dreams without overpaying. The newer model Wranglers come stock with six-speed manual Aisin D478 transmissions. Not only do these transmissions pack a punch, but they can also help to improve fuel efficiency. The mild-hybrid engine features in the new Wrangler is said to provide both fuel economy and plenty of offroad performance. The design team at Jeep has turned this notion on its head with the delivery of the powerful and efficient Wrangler. One of the biggest selling points of the Jeep Wrangler has always been its ability to climb hills and rock facings. As with many other features, the new Jeep Wrangler has taken the climbing angles it is capable of to a whole new level. Both the JK and JL Wrangler models have improved approach, breakover and departure angles than ever before. The Jeep Wrangler is a vehicle designed to make traversing rugged terrain easy and safe. Luckily, the new Wranglers feature 33-inch BF Goodrich tires. You can also upgrade the tires if needed. With this setup, getting over mountainous terrain will be easy.

These upgrades will provide you with more versatility and appeal. The last thing you want is to get stuck in your new Wrangler, which is why paying for the extra bells and whistles is a great idea. The first thing you will notice when getting in this vehicle is the push-button start and the 7-inch touchscreen display. Connecting your phone to your new Jeep Wrangler allows you to talk hands-free and listen to your favorite music. These features allow you to get the best mix of technology and old-school torque. This vehicle retains its value and will provide you with years of enjoyable driving experiences. If so, be sure to check out the other blogs on our website. Then, you will definitely love American muscle cars. Coined in 1949 due to the demand for a fast car, muscle cars have become one of America's most loved cars. The 1960s and 1970s saw the creation of some of the best muscle cars of all time. If you are looking for a muscle car, read one as we look into some of the best muscle cars. The Mustangs have undergone a series of transformation from the first to the fifth generation. There is more to this car that will make you want to own it. It was based on an F-body platform and offered no less than three six-cylinder engines and four V8s. A longer and wider Camaro was then introduced in 1970. The fifth generation Camaro was later introduced in 2010 with a better body and an even better performing engine. Several other challengers were later introduced over the years but the oil crisis crippled the sales of the muscle cars and this led to the early retirement of this car in 1974. In 2008 the challenger made its way back and this 3rd generation challenger has soldiered on and so far has had a number of stylistic updates. It is very fast and has a 797-horsepower supercharged V8 engine. It featured four-wheel disc brakes, optional side exhaust pipes, a big block, and a 6.5-liter V8.

This muscle car has gotten even better with time and the C6 generation that was produced from 2005-2013 and has better handling and is a much-loved sports car. Get ready to experience this legendary ZR1 supercar with a 755-horsepower and a top speed of 212 MPH. If you want a luxurious

muscle car, the Dodge Viper will be an ideal choice. This car has been in the market for 25 years and it is one of the best classics. It also borrowed a little bit from the Ferrari. This muscle car was an instant hit and GM improved its performance over the years. However, in 1974, its sales went down forcing its production to stop. Though you will not be able to find a new Pontiac because 2006 was the last year it was produced you can still buy it from its original owners. In 1967, the second generation Plymouth was introduced and it had responded to the need of the market. The model was much more aggressive with a V8 motor and better handling. It had three V8 engines and was on its way to muscle cars success. These cars have both high and low performing options but if you want to feel the real American muscle cars, then the high performing option is your ideal choice. Subscribe to our newsletters. Buy a rebuilt part or purchase a brandnew one. You can rebuild almost any part available in a remanufactured version. Yes, the car owner instead of a shop. Therefore, we'll review the top three automotive parts you can rebuild yourself instead of replacing. In some cases an alternator will make noise which actually indicates the failure of one of the two bearings. A brandnew replacement alternator can be extremely pricey on some models. A overhauled unit is less expensive, but often less reliable. Sure, the auto parts store replaced it, but they don't reimburse you for the labor it takes to remove and replace the alternator two or three times. The alternative to a new or remanufactured part is to rebuild the alternator yourself. Personally, I search down the overhaul kit before I make the decision on whether I'm going to rebuild the part or buy a new one. If the kit is available, I look at what's included and then I make my decision from there. We don't have to get into diagnosing each individual component, because we might as well replace them all once we take the

screws out of the case and open the alternator up. The high quality kits include complete instructions and most of the time you don't need any special tools. Unfortunately, just like my experience with rebuilt alternators, you don't always get a good replacement starter right out of the box. This especially true on German cars like the Mercedes Benz C Class or the BMW 5 Series automobiles. Diving a little deeper into the issue, you find these worn out brushes installed on high mileage automobiles. A complete overhaul kit for a starter can cost as much as a new part on some year, makes and models. They also include new front and rear bearings. Since the starter motor doesn't spin all the time like the alternator the bearings aren't usually the problem. The Armature is a heavy longlasting component and can often be cleaned or reconditioned. This applies to both foreign and domestic automobiles.

Another thing I inspect is the commutator bars on the armature. When the brushes wear out the carbon works into the spaces between the commutator bars. You want to make sure you can clean this out and there's no damage to the surface, because this is where the new brushes will ride. As in the case with the alternator a core charge is also due for a starter motor. The automotive parts company will return it to their factory where it's reconditioned and then resold to the next customer. The CV stands for constant velocity. Basically this is a large heavy duty universal joint that drives the wheels while they're turned and go up and down. The factory covers the CV joint on a front wheel drive car with a flexible rubber boot. After a couple of decades, this rubber begins to harden and develop cracks. As the lubrication level decreases wear increases on the CV joint. Drivers of high mileage front wheel drive cars will often complain about a clicking or grinding sound from the wheel area when this situation occurs. The complaint is most evident when the car is taking off from a stop with the wheels turned. This includes the inner tripod joint that attaches to the transmission, the shaft, the outboard CV joint and the hub assembly. It seems kind of wasteful to replace this entire unit when the only bad part is the CV joint itself. However, with stiff competition, rebuilt driveshafts are often available for popular models at very reasonable prices. Since there's a bit of work involved in replacing just the CV joint you'll have to make this judgment call on your own. A basic set of snap ring pliers is usually the only odd tool that you might need. It's also recommended that you check your Dodge auto repair manual for the procedure for your specific model. When these old rides start running poor, getting rotten gas mileage or stall it might be time to rebuild the carburetor. Reconditioning this low tech fuel delivery system makes a great weekend project.

See if you should replace or rebuild an old carburetor.
