Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Dolphin 4 Pool Cleaner Manual . To get started finding Dolphin 4 Pool Cleaner Manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

Dolphin 4 Pool Cleaner Manual

Its reliable filtration in all pool conditions, active brushing, and allsurface climbing brush enhance maximum pool hygiene. You and your family will be free to enjoy your swim with full confidence that your pool is completely clean. This powerful cleaner scrubs the floor, walls, and waterline and removes unwanted debris. Get a clean pool without the manual work. This powerful cleaner scrubs the floor, walls, and waterline and removes unwanted debris. Get a clean pool without the manual work. Answer The floats are on the arm of the Dolphin. The floats are used to assist the buoyancy of the cleaner when turning on the bottom of the pool and scrubbing the waterline. To adjust the buoyancy, slide the float out on one side of the Dolphin. If the cleaner continues to have issues turning or scrubbing the waterline, pull the opposite float outward as well. Answer The Dolphin requires a standard 120v outlet for power. Answer Dolphin robotic pool cleaners are best used in temperatures between 43 and 93 degrees. Answer No, do not remove, this is not packing material. These help the Dolphin with buoyancy within the pool. Answer No, the indentions on the rings are normal and due to the product settling during shipping. The rings will reshape once saturated with water. Answer The power supply is water resistant but not waterproof. Please cover the power supply if inclement weather approaches. Do not leave the power supply in standing water. Do not allow the power supply to be submerged in the pool. Answer It is safe to leave your Dolphin cleaner in the water when not in use. However, when adding chemicals to the pool please remove the Dolphin until the proper chlorine and PH balance are obtained. Answer The Dolphin is not designed to be used with an extension cord or surge protector. Answer Not all Dolphins are suitable for infinity pools, please contact Maytronics directly or your local Dolphin retailer for information regarding the models that are suitable for this pool
type. <http://fxmeat.com/upload/ae50254c9f1dfd51b33e96176b33d312.xml>

- **dolphin 4 pool cleaner troubleshooting, dolphin deluxe 4 pool cleaner manual, dolphin deluxe 4 pool cleaner troubleshooting, dolphin 4 pool cleaner manual.**

Answer Yes, the Dolphin is suitable to use in fiberglass or Vinyl pool surfaces. Answer Maytronics offers several pool cleaners both via brick and mortar stores and via internet dealers that include warranty rights. Answer Dolphin pool cleaners purchased in the United States must be operated in North America in order to retain the warranty rights. Using any Dolphin pool cleaner outside of North America that is purchased in the US voids the warranty service agreement. Answer The power supply unit is an electrical device which must be protected from the elements. When in use the unit needs to remain dry. Do not submerge the power supply unit in water as this will damage the internal components. With the Industry's Best robotic pool cleaner warranties and service, our Customer Support and Technical Support teams are here to keep you and your family in the swim. You may be right! In this DIY Troubleshooting blog series, we'll offer detailed tips informed by robotic vacuum and pool owner FAQs. For all you know, they're quite possibly questions of your own. Each blog will address a different Dolphin automatic pool cleaner

issue you can remedy yourself, yet you're always welcome to contact us. That's 888 3657446. <http://www.hotpod.net.au/userfiles/6sc6112-manual.xml>

These Dolphin DIY tips will help you solve the problem worryfree. Maybe you wonder whether your Dolphin's Intelligent Navigation system is ontarget. Or, perhaps, your pool cleaner's timer and other programmable features seem a bit daunting. In any case, Maytronics' DIY Troubleshooting tips are meant to help you solve the problem quickly and worryfree. Through this series, you'll learn simple DoItYourself remedies related to In this first installment, we'll walk you through the Dolphin pool cleaning robot filter maintenance process. Let the troubleshooting begin! As a happy consequence, your inground or aboveground swimming pool offers you nothing but sparkling clean pool water. Though, more importantly, you and your guests can comfortably enjoy yourselves knowing that you're safe from harmful bacteria. Maytronics has made it as simple as possible to enhance your residential or commercial swimming pool experience, since all you typically need to do is Pull the filter out, rinse it clean with a hose, let it air dry and reseal it. Answers to Dolphin user questions about filters follow. What could this mean It should come on anytime a filter bag or filter cartridge is near full, making it difficult for your Dolphin to draw water through it. Let's say this isn't the case for you, since it doesn't sound like it. You'll want to apply these DIY quick fixes As a result, that light shouldn't turn on again until the filters begin to fill up or are full. Because of this, I want to know if there are replacement parts available. If so, what's the best way for me to obtain them It's possible your filters are still covered by a warranty. Even if they aren't, parts and accessories like these can be purchased from a local authorized retailer within the Maytronics Distributor network. We're happy to help you figure out which situation applies to you As you've learned, our Customer Support team is happy to serve you. So is our Technical Support team.

Let these pool industry professionals enhance your clean, safe swim experience with us. Can we help you find accessories for an Olympicsized swimming pool. Do you hope to check on a repair. Are you keen to know which Dolphin robot is best suited to your own private swimming pool. Contact Us at MaytronicsUS.com. Or click [HERE](#) to help yourself Got a DIY topic to suggest. It also analyzes reviews to verify trustworthiness. Please try again later. Rob Wilson 5.0 out of 5 stars Restored the movement of my cleaner to new standards. I didnt realize until I dug into the cleaner that almost all of the existing wheel bearings had failed. Looks like it will be necessary to replace the wheels at least every 1 or 2 years if you use your cleaner daily as I do. But once replaced

with a new scrubber and climbing rings, it is as good as new. If you can use a Philips head screw drive there is no reason you shouldn't refresh these wearable parts every couple of years. Not sure if it's the distributor sending remanufactured parts or they're just poorly made from the manufacturer. The order did arrive promptly however, so I don't have issue regarding this. The old pulley gears were definitely worn out. Good fit. Good price. Perfect replacement. Now get to cleaning DOLPHIN. This is where a pool cleaners often called vacuums come into play. There are four main types of pool cleaners. First up, robotic cleaners. However, they are more expensive than the other options. Instead of being attached to your existing filtration system, robotic vacuums are self-contained units that are plugged into an electrical outlet. They may have fancy software that allows them to map your pool and make sure the entire surface is cleaned. Many of them can climb the walls up to the water level. Once the cleaner caddy is hooked into a wall outlet, all you need to do is plug the cleaner into the caddy and submerge it in the pool. Then you choose the programming option on the caddy's control panel and press start. It cleans floors and lower walls with scrubbing brushes, has a long cable for even large pools, and picks up almost all debris. Safe for all surfaces including vinyl. Long 50 ft. It cleans up to the water line and learns your pool to ensure maximally efficient cleaning.

They often require the use of a booster pump in addition to your current filtration system, which can increase water circulation but also increase your cost. Pressure-side vacuums are generally a mid-priced option, but the cost of the booster pump must be considered. They do reduce strain on your filter by not dumping debris into it. Debris picked up by this type of vacuum is stored in a self-contained bag, but they are better at picking up larger debris than small, and usually clean the floor better than the walls. This attaches to the vacuum line, which must be adjusted to the correct length of the pool by following the instructions provided. All that is required once the vacuum is attached to the pump is to test the wheel speed and adjust the jet on the back for optimal wall climbing. Installing the booster pump should be done by a qualified technician. It uses a booster pump that is reportedly easy to set up. It requires a booster pump as well. TailSweep PRO Compatible Sweeps, scrubs and vacuums the bottom and walls of your pool. Runs off separate booster pump. Drive Mechanism AllWheel Belt Drive Equipped with single chamber filter bag and includes 31 feet of feed hose. The suction causes them to move randomly around the bottom surface of the pool. They are the cheapest option aside from manual vacuums, but they create additional wear and tear on your filter and do not always do the best job. However, for pool owners who have a limited budget and no time to do the job manually, a suction-side system will often suffice in a small pool. Essentially, you flood a hose, attach it to the suction side of your pool pump, and attach the flooded suction cleaner. Valve adjustments may be necessary to ensure that the flow is in the desirable range. It is a medium-priced option that has individually replaceable parts. Devours small and medium-sized debris and cleans floor, walls and steps of your entire pool.

FlowKeeper Valve automatically regulates water flow to maintain peak cleaning performance even with lower horsepower pumps. Wheel Deflector for movement around tight corners. Scuff-resistant LongLife Hoses eliminate scuffs on all pool surfaces. A little more expensive than the Baracuda, it also has good longevity and cleaning power. It is attached to the suction side of the pool filtration pump, and is the cheapest option. However, it requires regular manual labor and puts much the same drain on your filter as a suction-side pool cleaner. Check out our guide on the best pool cleaners of every type to get all of our recommendations. Participation in these programs helps us keep the lights on at PoolResearch.com and in no way impacts our research process or editorial opinions. Whether you need a remodel, a new pool, or just some maintenance help, HomeAdvisor will find the best professional for the job. The all-new Quantum is here with groundbreaking new technology to ensure that every inch of your pool is cleaned to a whole new level. See the features and warranty that set the Quantum apart. We are always looking forward, not sideways, never back. So we started from scratch and gave it everything we had to make the newest Dolphin even better.

Our goal was simple. To create the next Dolphin that can do more, deliver more and consume less power than ever before. A fascinating future that shows what's possible. Its design is completely new, but like that of every Dolphin that came before, it's based on years of research and engineering. The allnew Quantum takes its place at the top of the Dolphin line and in the top echelon of its class. There's nothing overly complicated about movement straight ahead. To appreciate the essence of the Quantum, one only has to observe the remarkable lateral movement of the robot as it effortlessly adheres to the vertical pool surface. This is where Quantum separates itself from every cleaner made before.

For the first time ever, powerful vortex jets were added sides and top of a robot. The result is the world's first robot that can move laterally along the walls of your pool. With its superb weight distribution and low center of gravity, the Quantum is engineered from the ground up for next generation mobility. From innovative lightweight materials to new filtration media, to advanced 24volt DC motors and microprocessors, we're constantly working to get the most out of every electron. But we aren't satisfied with just using less energy. The demands of pool owners everywhere are changing and we're listening. Highly efficient, stateoftheart DC motors and gravity defying PowerJet 3D Mobility deliver an exceptional user experience while reducing energy use up to 90%. In a class by itself, the Dolphin Quantum was designed from the ground up to be easier to buy, own and operate. It's natural, that is, if you're the new Quantum. Long suggested to be part of the ultimate in pool robot mobility, 3D Jet technology has arrived. Instead of the traditional single jet, the Quantum employs three jets in a prescribed way throughout the range of motion. Three jet nozzles produce multiple streams of fastmoving water that combine to create vectored thrust. The patentpending technology provides constant grip on vertical surface for superior wall and tile line cleaning. As Quantum traverses and climbs the wall, the jets provide the robot with precise control to move in any direction at any time. Jet drive propels the robot with vectored thrust, providing unmatched maneuverability. For the first time ever, a poolcleaning robot has the ability to precisely hold itself in a fixed position against the effects of gravity. As a result, the Quantum's advanced track driven navigation system can operate to its full potential. PowerJet 3D Mobility provides efficient cleaning along water lines and improves navigation accuracy while enabling escape and avoidance from any obstacle.

Cartridge filters have been around for years but pool owners found them small and difficult to clean. Previous generation cartridges made debris removal nearly impossible with small cavities that trapped small debris and fine dirt. With the new Quantum, Dolphin introduces a new 400 square inch cartridge with the highest capacity ever recorded on a pool robot. The new Dolphin SnapLoc Filters make robot cleaning easier than ever. All four sides of the Quantum filter simply snap apart for quick and easy cleaning. In addition, the bottom panel is hinged to allow debris to simply fall out during cleaning. Specific types of media work best for specific jobs. Quantum gives you the power to choose the right micron filter for the job. The quickchange filters allow you to change the media in seconds. Insert the NanoFilter to handle small debris like fine algae down to 2 microns. Choose the standard filter for maximum suction. The oversized filter cartridge is easy to remove and cleanup is faster than ever. Want to find debris and algae that passes through other filters. Go microfilter. Need to pick up a bushel of leaves. Choose the oversized standard filter option. Traditional cleaners merely pass over difficult to remove pathogens, leaving them fully intact. The Quantum robot was engineered from the ground up to deep clean. Engineers gave Quantum dual scrubbing brushes that attack the bacteria, algae and biofilm that is firmly attached to the pool wall. HyperBrush is especially effective against biofilm, a structured community of microorganisms that increases chlorine demand, destroys water quality, and frustrates pool owners. Guided by SmartNav 2.0, Quantum's dual high RPM brush power scrubs every square inch of any pool with remarkable efficiency. Continual slippage results in lost energy efficiency and reduced performance. The Quantum takes a radical departure from the conventional wheel with continuous rubber tracks.

Quantum maintains constant contact even when climbing slippery surfaces. No more slipping. The rubber track also improves directional control and provides greater force than wheels. Tracked robots also glide smoothly over obstacles like drains and are capable of climbing straight up vertical walls. The Quantum's traction is further improved with a high grip, wateroptimized tread and geometric shape, which minimizes rolling resistance for superior providing superior weight distribution, traction, and wall climbing. The new Quantum is equipped with a SmartNav 2.0 Robotic Scanning to ensure that every inch of your pool surface is reached. SmartNav software delivers highly optimized scanning and coverage for a new level of clean. Quantum calculates the optimal pattern for faster cleaning and improved efficiency. With the ability to sense ladders and drains, Quantum won't get hung up like ordinary cleaners. Microprocessor controlled Pool Scanning ensures complete efficient pool surface coverage. Its newly designed frame is sleek and low to the ground for minimal water resistance as it moves along your pool's slopes and walls. The new Exoskel is a minimalist architecture that keeps only essential structural parts. Quantum was given a convenient carry handle that is located near the front for easy handling. A new fast water release system quickly removes excess weight and ensures Quantum remains lightweight and easy to carry, even after a full two hours in your pool. With programmable modes, you can set Quantum to automatically run when you need it daily, 2x per week or 3x per week. Quantum comes with a builtin, programmable weekly timer to ensure that even if you are out of town, your pool stays clean and ready to enjoy. This means you can schedule your robot to run less often. Quantum will complete a cleaning cycle in pools up to 50 feet long in just two hours. The new advanced controls allow you to run Quantum only as needed instead of every day, saving even more energy.

Conserving resources while maximizing output. That's why the Quantum operates on nearly 90% less power than old fashioned pressure side and suction side cleaners. While other pool cleaners can expend a massive 1800 watts of power, the Quantum requires only 180 watts. The newest Dolphin robot requires just 5 cents per hour of operation. This economical balance of power and efficiency is what keeps the Quantum ahead of traditional, powerhungry robots. Its motor lies low in the underbody, lowering the robots center of gravity and enhancing its lateral dynamics. Even weight distribution between front and rear promotes better balance and allows electrical energy to be converted into propulsion more efficiently. But that's not the whole efficiency story. Quantum's two hour cleaning cycle means it cleans quickly and thoroughly so it operates less. The Quantum picks up where other robots leave off with innovative new features that make owning a pool as easy and carefree as it should be. Experience the peace of mind the Quantum can bring you with its limited 2year warranty backed by the world leader in robotic pool cleaners. It's time to try Quantum in your own pool for 30 days. If you're not 100% satisfied, just return it. Let Quantum challenge everything you think about robotic pool cleaners. All Rights Reserved. Set it for just one week or to repeat on a weekly basis. You can also switch to Tilt mode, for a more playful and realistic experience. All units ship directly from the manufacturers warehouse in Georgia, come with a one year warranty from the manufacturer, and we provide free shipping on all orders. The power supply is water resistant but not waterproof. Please cover the power supply if inclement weather approaches. Do not leave the power supply in standing water as this will damage the internal components. Do not allow the power supply to be submerged in the pool. The Dolphin is not designed to be used with an extension cord.

There are many different types of extension cords and we do not recommend using one. However, it is safe to use a surge protector with the Dolphin. This will help protect the Dolphin from surges in power such as thunderstorms. It is safe to leave your Dolphin cleaner in the water when not in use. However, when adding chemicals to the pool please remove the Dolphin until the proper chlorine and PH balance are obtained. While the unit can remain in the pool during use of the weekly timer function if available on your model, we do not recommend leaving the cleaner in the pool for long extended periods of time. Dolphin pool cleaners are safe to use for the general public, however, for safety precautions we do not recommend swimming while the cleaner is in use. Dolphin robotic pool

cleaners are best used in temperatures between 43 and 93 degrees. No, the indentions on the rings are normal and due to the product settling during shipping. The rings will reshape once saturated with water. These are to protect the climbing rings during shipping. Please be sure to remove before the initial cycle. No, do not remove, this is not packing material. These help the Dolphin with buoyancy within the pool. Yes, the Dolphin maneuvers around the pool by starting and stopping the impeller. Using the floating cable, pull the robot to the edge of the pool. Grab the handle and remove the robot from the water. Do not pull the robot out of the water using the cable. Place the pool cleaner on the side of the pool to allow the water to drain. Please visit link to register you Dolphin Pool Partz sells many of replacement consummable parts that you made need. Please contact us directly if there are parts that you are looking for. Please contact Pool Partz directly for warranty service. We will help you with your issue and determine how to proceed with the warranty. To view the manual for your Dolphin, please visit the link Yes, the Dolphin is suitable to use in fiberglass or Vinyl pool surfaces.

Dolphin pool cleaners purchased in the United States must be operated in North America in order to retain the warranty rights. Using any Dolphin pool cleaner outside of North America that is purchased in the US voids the warranty service agreement. Dolphin pool cleaners are designed to last many seasons. However, the lifespan differs from Dolphin to Dolphin. Many different factors play a role, such as amount of use, pool chemistry, and pool surface. DIY repairs should be completed by an authorized technician. Please contact Maytronics directly at 18883657446 or the support page of their website at. After selecting one of the above options, the robot will start to operate at the next occurrence of the programmed start time. Note A fourth click will cancel the cleaning schedule program without a visible indication. If the robot is working in Weekly Timer mode, the Weekly Timer button constantly blinks between cycles. At the end of the week, the power supply automatically switches off and you need to reschedule the robot. The advanced design has been proven to operate for years at a time. It comes with a fully assembled and tested robotic vacuum two sizes, four models, a choice of 3 different caddy carts, 4 different cord lengths, a waterproof remote control, and more. It has an electronic control center that talks to you with instructions and prompts, and reports any unforeseen service issues. Download the Enduro M specs. Its dual drive motors and split brush technology provide incredible maneuverability and coverage while its digital remote gives the user pinpoint navigation and control. It boasts double filtration and scrubbing power with adjustable pool parameters and choice of cycles. But you can send us an email and well get back to you, asap. To prove how serious we are about delivering the bestinclass high performance robot, the Dolphin Premier is backed by the very best warranty in the industry.

While some pool cleaner manufacturers play tricks with their warranties, Premiers nonsense warranty is not prorated and not limited by the number of cycles. Premier is built to last. Youre free to use your pool cleaner as much as you like. In the unlikely event that Premier doesnt perform as weve promised, were here for you. Thats why we designed Premier to minimize downtime. Premier is built on a modular DIY platform. In the event that Premier needs service, weve made it so any component can be easily replaced by your or any of our many warranty repair stations in about 10 minutes. Rapid repair means your cleaner will never be out of your pool too long. Dolphin pool cleaners are now available in over 42 countries. With over 1200 dealers, your Premier will never have far to go. Please contact your dealer for more details on Dolphin Premier warranty service.
