I was installing a new drive in a Compaq Presario S3200NX and had an issue locating the multi media audio device driver. I read a description on this site that stated to download pc wizard and try to locate the driver through that program. I located the link above by searching for the website with reference to this name and located a driver that will work with the chipset described above. I hope this link helps you save time it has worked very well for me. It also has a nice equalizer setting with extra features. Took me forever to find this driver. I also had to enable the Spdif control through the vinyl software that is downloaded with this driver. I hope this helps someone. The Presario family of computers was launched for the consumer marketplace in September 1993. Although HP has since acquired Compaq, the Presario name was not discontinued due to its marketability.

By following the stepbystep instructions you will be successful in upgrading randomaccess memory RAM for all HP Compaq desktop Presario computers. Visit the following HP Compaq page on instructions to install RAM on your Presario Computer. Use Compaq Memory Configurator Choose your Compaq Laptop Desktop or ServerBuy sell anything online. I tried different batteries and bricks of different powers. Free of charge. I want to try to replace the motherboard thinking it is maybe the power supply is not working. Can someone tell me what is the correct model number for my motherboard. I see many there to buy including 498462001 and 501266001. Or the other of them are the right pair I also need a BIOS update. I found a manual for it on the site of HP, which was useless. I bought the ms7225 Mo some time ago. I found the drivers. Here is the link guys and girls. You can thank me later. I have a Compaq Presario CQ5230Y with a motherboard M2N68Narra6. I have it maxed out at 4 GB of ram. I upgraded to an AMD Phenom II X 4 945 CPU. The slot I would use is a PCIe x 16 location. My goals are to replace the builtin nVidia GeForce 6150SE with a card so I can use the dual display. Also, I use Sony Movie Studio that allows the GPU to help in video rendering. I am therefore looking for a card with CUDA. I guess the more hearts CUDA best. Maybe a 720 GT or GT 730. Something higher Something lower I dont know whats compatible. I read questions with bios and latest maps. Any ideas of what is and is not compatible with my old machine. It seems to work. Is there any motherboards that support DDR3 RAM and have at least three connectors SATA SATA 3 preference that will be adapted to this case PCI ports on the left instead of right of ports Hello A little new here. Im looking at upgrading to an Intel Core 2 Duo E7400 processor which has close to 3.0 Ghz 2.8 to be precise of the operating speed.

<http://foot-five.com/images/cakewalk-pro-audio-9-manual-portugues.pdf>

I have never replaced or upgraded forever, and so I want to make sure Im making the right decisions when buying upgrades. I would appreciate your help or you guys could give me advice. Thank you and have a nice! Hello Hello CherylG Note that I dont want to restore XP in Compaq restore CD or the restore partition requests. Motherboard seems to be MicroStar MS 6390 . HP technical support told me to Via chipset driver at [www.viaarena.com](http://www.viaarena.com). Via KM266 HERE Chipset My son put a password in order to prevent his brother to use his computer. How can I do this Hello It has the same socket but Im not sure what bios go or if its going to work. This is false. I searched all over the internet, but have failed to get information on the motherboard. I want to improve my CPU for better and faster performance. Would you recommend please a list of some good processors for me to choose. Hello Every time it boots up vista and I run internet explorer, I get a strange blue screen

which exports a file memory and reboots. There's almost nothing on this laptop anyway so I'm always willing to do. A regular format has done nothing to solve the problem, I did it with Ubuntu and it did a quick format, but I had no problem with Ubuntu. Then I reinstall Vista and I am constantly having problems with a blue screen of death. This will bring you in Recovery Options where you can choose to restore the system in the same State as when it was purchased. But if, as you suggested, is that a problem of hard drive reinstall won't help. You can search for online stores with the part number. So, could someone give me a hand here please Thanks in advance. Hello It's one with onboard nVidia graphics and an HDMI output. None of them would be viable and of course even wouldn't she do on such an older machine now.

The BIOS would support a higher clocked CPU speed You have 800 MHz if you have two channel memory will clock at 533 Mhz and then multiplied twice which is 1066 Mhz It is a parameter which allocates memory of your cpu long story and as I can see, your PCH supports 1066 Mhz which will make it interesting. Instead I created a picture or drawing of the application who will use Labview. It's a drawing of a part of the plane that have installed controls and sensors. I would use this drawing I created I downloaded the patch LV09 F1 and installed successfully but when I tried to install f2 or f3 I received a message NOR Labview 2009 must be installed before using this patch. Desktop Laptop and all other HP Compaq Servers Computers Memory Ram. Memory Selector. However we request customers to provide. The Presario family of computers was launched for the consumer marketplace in September 1993. In the mid 1990s, Compaq began manufacturing PC monitors as part of the Presario brand. A series of all in one units, containing both the PC and the monitor in the same case, were also released. Although HP acquired Compaq in 2002, the Presario name was used until the Compaq brand was discontinued in 2013 by HP, due to its marketability issues. These retained the original spaceship shape of the second generation Compaq Presario towers, except most had smoked black plastic flipup doors and a slightly squatter design that was more rounded. The monitors shared the same design cues All of them had a split lower bezel which ran down the middle, just like the towers they were meant to match. There is a very rare set of monitors the FX series which have builtin speakers and a subwoofer, and three extra USB ports. These are designed to go with the 4800 series Presario multimedia towers—specifically the 4830 to 4882, as they were all black like the FX monitor. The FX is the only exception, having builtin JBL Pro powered speakers with a subwoofer in the rear of the casing. This is the Australian version of the Compaq Presario. This is the first model in the desktop 2200 series. By using this site, you agree to the Terms of Use and Privacy Policy. Direct From The iOS App Store. Ive tried recently and many times in past 2years. Compaq S4020WM Driver. Compaq Presario S4020WM OnBoard Audio Solution.

Compaq only supports WinXP on this machine which has been failing miserably. Reloading with Win2k Pro. MotherBoard is an FIC Model AM37. Windows 2000 Seems to handle the NIC internally. However Video, Audio and USB require additional drivers. Compaq offerings include Presario notebooks and laptop PCs, desktops and computer accessories. Seems noone can get an update for it. Im also running Win7 Ultimate and the same CPU error shows in that in System.Both OS are 32 Bit. My computer isnt really up to scratch to run W7 really well but it does run albeit a bit slowly. Thatll be changed when I get on with the com build I am working on piece x piece. Whats your views on that. The CPU does have the Sempron name attached to that black ID sticker that is atop it. As for the small print on the sticker I cant read that, no magnifying glass. Oh, the mobo FSB is set at 133, as it has always been. The only other setting is 100 and thats never been used by me. I have done a search of threads here and read the one posted by Speedy yesterday but Im not prepared to try anything without first getting some clues as to what Im doing. Id appreciate your advice, thanks gza. Ok, I tried Speedys fix that worked for him but it didnt for me, no offence Speedy. Did that and I still have the wrong processor and speed showing in Device manager. Im getting bad thoughts about the Sempron sticker that Ill keep to myself.hope its not Largactil time% Just read your replies and heres a few answers Thats cool KarameaDave Speedy, The Bios update that i got way back was from either the Phoenix Technologies site or the AM 37 FIC KM266 site. It seems that an update beyond the one I have cannot be got, as is seen in doing a search for an AM37 BIOS update on the web. There are many hits showing that other people cannot get an update for the AM37 Bios. I do have another AM37 mobo here that also had its cpu fried.

Ill try this cpu in that and see what happens and post back Thanks Ill do the scan for hardware changes as you suggest Speedy. The info on the cpu ID and its speed were taken from Device manager in both WXP Pro and W7. Thanks again. Speedy,I have gone to the link you posted and have the update sp23966.exe which I will set about flashing the bios with shortly. It seems to be the same one that I already have AM 37 v3.20 but Ill try it out. Thanks KarameaDave, Ill try the cpuid you suggest but like you I expect the same results back, but Ill try it. I tried it about 34 year back on a Pentium3 450MHz Id fitted to a slot replacing the Pentium2 MMX 300MHz cpu. Note CanadaPost tracking and delivery have been impacted by CoVid, with delays of up to 3 weeks in their system. They have suspended delivery estimate committments.
