I am lost without my Construction Master Pro Trig. A great tool in the office and on the construction site. If you dont have one you are wasting a lot of time figuring things the hard way. This product is spot on I used it for about 10 years and then bought the Construction Master Pro Trig and put my original calculator in a drawer. Well, about 17 years later recently, I found it in a drawer and the battery still works. Ive used it daily for the last few months now and its still going strong. Unbelievable! Thanks for a great product. Its great only having to have one calculator instead of two to perform all of the functions provided on this one. The armadillo casing tops its excellence. The only issue is that if you use it day in and day out, the buttons wear out within a year. We go around in circles every day all day long. The Trig functions and the conversion functions are fantastic. We have purchased 7 Construction Master Pro Trig calculators for each of our employees and will purchase more as we hire new

Just Monte 4.0 out of 5 stars It does absolutely everything I need and a LOT more. What is lacking, for me, first and foremost, is button accuracy. Sitting flat on my drawing table, with nothing to absorb my presses, I get missed key presses far too often. I am used to blind entry on a 10 key numeric keypad, and my old Construction Master made it 25 years before it was time to let it go. I have had this one less than a year, and it is not wearing out. It has been that way since out of the box. So I lose time watching every key press, every single time. That extends bid time out a good bit when adding up a large project. And I am still not 100% comfortable with my numbers a lot of the time.

A lot of double and triple checking myself to make sure what my fingers felt is what went into the equation. Second thing, for me, is even with the adjustable angle readout, I get a glare most times and have to move it around to get just the right lack of reflection on the readout. Seems to me a slightly matte finish that doesnt bounce light so hard might be better, but I am not about to scuff up the screen. As for the function and accuracy, as long as the keys record my input correctly, you can beat this one. As far as that, I trust it This does all the things that the smaller calculators do and give even easier access to trig functions so its a win win for functionality. I like the book that is included, its a little clearer than the little booklet that comes with the other calculators in their line, it is more expansive and clearer which makes getting the most out of the calc easier for those functions you

dont use all the time. Its big! I actually wish it was about a third smaller than it is for use on the shop floor but if you actually use it on a desk like its supposed to be or have eyes with some years on them then it will probably be right up your alley. Everything else about the desktop model is great. Unfortunately I am dealing with Engineering drawings scaled in metric measurements and I needed a MM key. Had to dig out my trusty pocket calculator for the task I had doing footage quantities and takeoffs for my job. Smaller keys made the job harder to perform. Came with induction manual and took me only a matter of 20 min to learn new functions. I like the size of display and the keys. Maybe good features. First saw this on the desk of a construction estimator at a lumber yard while doing takeoff of a house. Purchased my own and I love it. Not recommended to spend money on it. I have the standard size Construction Master 5 and decided to get something easier to read to keep at the office. Love this calculator.

The only thing I didnt like was the pocket reference guide isnt in english. So I have to carry the full size manual with it or take a class to learn what ever language this is writen in. Other than that, it is good overall. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. And yet, there aren't many industries as numbersheavy as construction, and as a construction manager, you just have to deal with that. They're portable and, unlike regular calculators, they're built specifically to solve construction math problems. Which one should you choose. Or should you go with multiple calculators. That depends on what you want to get done. They're listed below in alphabetical order. The Construction Master Pro is its flagship model when it comes to general construction calculators. You can also use it to calculate how much material you need, the volume of an excavation project, and even how many truckloads you need. Calculated Industries also offers the Construction Master Pro Trig and the Construction Master Pro Desktop. I know these calculators have many uses, but I highly recommend it to any advanced wood worker." — Elijah Stephens I played with it for days then used it to order concrete for a new barn pad which I squared up with it first. Waste of concrete was negligible. Also used it for truss lengths in the barn

repair. I do recommend sitting down with it, reading the manual and running through the examples to really learn the power it has." — Wildlife It does everything I need to do. I would recommend this to anybody who is looking for this type of calculator.

"— shelby331 Retired now but I still keep a Jobber 6 on hand. Jobber 6 is the one to have."— Charles A. Considering how much money you could lose by getting materials estimates wrong, this little yellow device could save you a bundle if you struggle with those calculations. It also does many other calculations and has a handy pouch for the manual and a integrated cover to protect it from dirt and spills. The yellow case is a nice touch so you can find it quick in a pile of tools." — Michael Kolesnik A boss at a previous job bought me my first one, but I had to leave it behind when I changed jobs. Of course I immediately bought an identical one. Sure you can get a phone app that does the same things, but this is much more handy than a touch screen in a dirty greasy filthy dusty shop environment. And you can actually press the buttons with shop gloves on." — Douglas Patton One reviewer even said this is the whole reason he bought the calculator. It can find linear measurements of any shape, which it can convert between scales and dimensions. The wheel is adjustable, I liked that. It has a bunch of different functions I'll never use and tons of scales. Really makes a huge difference when I'm measuring up walls and great for when things are curved. They sent me two extra batteries and an extra wheel. Wish I bought this a long time ago." — Nicky Nacks I can get a guick plan measurement without having to carry a 12 inch rule. Fits neatly in my pocket. Great new tool." — Dan Durham So what are you using right now to do the job. Outside the office, he enjoys spending time with his family and friends, catching up with the latest offering from HBO or paying a visit to a new place. My work field is civil construction. When i out of the home, i always bring the calculator with me. Recently i am using Casio calculator. It is also quite easy and useful to me. You give me other option to choose one and i want to buy one of these list. Comments must be substantive, professional, and avoid self promotion. Moderators use discretion when approving comments.
